Control valve LINA

USAGE

The control valve LINA has been specially designed by us for air handling systems according to DIN 24154. Despite its lightweight and compact design, we have paid great attention to ensure that it meets the industry's highest requirements. Depending on the material combination, LINA can therefore be safely used in your system for extreme control tasks (high temperatures, aggressive media, etc.). Due to its modular welded construction, LINA can be quickly and suitably modified by us for your specific application. Like all our valves, LINA also has an integrated ISO interface and is delivered with corrosion protection as standard.
