Rectangular throttle valve RENA

USAGE

RENA has been designed by us as a single or multi-leaf system. Unless otherwise specified by you, we manufacture it in accordance with DIN 24193. The multi-leaf system from RENA I has better control characteristics and can be ordered by you from us running synchronously or asynchronously. On request, we also supply RENA with a fire-resistant lining made of concrete or mineral wool. By choosing the expansion level "Blocking Air", RENA is 100% leak-free and thus sealed. As with all our flaps, the construction of RENA is also very robust, low-maintenance, and safe. RENA provides you with long service times under extreme loads, a very low failure probability, and reliable operation.
